- Any other item not included in "COST INCLUDES" section.

SOUTH COL ROUTE CAMPS:

EVEREST BASE CAMP: 17,060'/5200M

Everest base camp located on a moving glacier at 5,200 meters from sea level where you will spend up to 45 days. Conditions in base camp will remain consistent during the climbing period and will consist of shifting and moving tents and platforms as the ice moves and melts. The area is harsh, but beautiful surrounded by Pumori, Lho La, Nuptse and the Khumbu Icefall with warm mornings and occasional afternoon snow squalls. With so many expedition teams at BC it looks and feels like a small village in the Himalaya.

EVEREST C1: 19,357'/5900M

Reaching C1 is the most technical part of a south side climb since it crosses the Khumbu Icefall. The Icefall is 2,000' feet of moving ice with deep crevasses, towering ice serac's and avalanches off Everest's west shoulder. During the climbing period we attempt to spend only 2 nights at Camp I for acclimation. Once you have proper acclimation our plans call for us to move up and down directly from camp II for safely.

EVEREST C2: 20,998'/6400M

Camp 2 is located in a lateral moraine at the bottom of west ridge. It is a very safe and sheltered location with tremendous views of Lhotse. All companies' set-up their main climbing camp for the duration of climbing period here with tents for individual climbers along with kitchen and dining tents. Camp 2 is the main acclimatization camp and the base for camp 3 acclimatization climbing and the final summit attempt. This is the camp, where you are spending the most time after base camp.

EVEREST C3: 23,294'/7100M

Climbing the Lhotse Face to C3 is often difficult since almost all climbers are feeling the effects of high altitude and are not yet using supplemental oxygen. The Lhotse Face is steep and the ice is hard, but the route is fixed with rope and the angles can range from

30 to 45 degrees. It is a long climb to C3, but is required for acclimatization prior to a summit bid. You will spend 2 nights at camp three for acclimatization and the summit push.

EVEREST SOUTH COL: 26,300'/8000M

Welcome to the moon. This is a flat area covered with loose rock and surrounded by Everest to the north and Lhotse on the south. Located at the South Col is the last camp; it is easily accessible by a majority of climbers without supplementary oxygen. There are two rock sections to navigate before camp 4: the Yellow Band an inter-layer of marble, phyllite and semi schist rock and the Geneva Spur, an anvil shaped rib of black rock. Both of these areas are set-up with fixed ropes.

EVEREST SUMMIT: 29,032'/ 8848.86M – 1 HR OR LESS

The last section from the south Col to the summit takes 09-13 hours to navigate. There is the Balcony, the Hillary Step, and the south summit before reaching the central summit. The route to the true summit is a moderate snow slope and while tired, adrenaline keeps most climbers moving at this point.

As per our experience these are the relative times for travel between the camps

Base Camp: 17,060'/5200m	Balcony: 5 - 6 hours
C1: 19,357'/5900m - 5-6 hours, 1.62 miles	South Summit: 28500'/8690m - 4 to 5 hours
C2: 20,998'/6400m - 2-3 hours, 1.74 miles	Hillary Step: 1 hour around
C3: 23,294'/7100m 5-7 hours, 1.64 miles	Summit: 29,032' / 8,848.86m 1 and half hour
Yellow Band: 2-3 hours	Return to South Col: 5 -8 hours
Geneva Spur: 2 hours South	Return to C2: 5 hours
Col: 26,300'/8000m- 1 hour	Return to Base Camp: 5 hours
